

## Truck Parking Garage

### Enough space for company vehicles

This parking garage for trucks is a customized and individual solution for the client La Provencale. The food distributor required a parking garage that would make optimum use of the space available and provide secure housing for the company's own trucks. With the support of Builder Partner Scholtes et Brauch, located locally in Luxembourg, the project aiming at supplying parking space for trucks was completed in just seven months.

The four-storey car park has spaces for 500 cars. On the lowest floor of the parking garage there are parking facilities for 40 trucks. Particularly in large cities, at airports or shopping centres, parking is scarce and efficient solutions are required. Open car parks with a steel structure, such as the truck parking

garage, have become a common and popular solution. The advantages are obvious: fast construction, manageable costs, efficient use of space and low energy costs due to the use of daylight and fresh air.
