

DIY Store

40,000 products under one roof

This new home improvement store was built for the customer Mr. Bricolage in Romania, located about 120 km north west of Bucharest. Mr. Bricolage is a leading French home improvement chain with over 500 DIY stores throughout Europe and Africa.

With the support of architect A. Avram, this steel building was completed within a very short time. The hall has a floor surface of 7,200 m², which is divided between two storeys. So it is possible for this DIY store to have 40,000 products on stock. With spacious aisles and ample shelving, this store can present its goods in an attractive and customer-friendly way. The architecture of the building is characterized by its clarity; pure white and plenty of glass. The client is delighted with the building

due to its modern design as well as its great functionality.

Our building system offers flexible design possibilities for spacious and user-friendly retail outlets and shops.
