

## Chicken Stable

### Chicken house - plenty of space for now and the future

The chicken house was designed and constructed for the biggest chicken farm in the Russian region Yaroslavl. Since the company was expanding very rapidly, the farm building had to be constructed in a very short time in order to create new offices and a production area.

The steel hall for the chicken farm was constructed on a building ground surface of 1,200 m<sup>2</sup>. With a width of 31 m and a length of 18 m, the hall offers plenty of space for the company. The multi-storey building was constructed using Inodek Steel pre-fabricated floors which is the latest technology for steel structures. The high quality LMR600 roof enabled a quick erection of the building. The well thought-out chicken house was designed so that future ex-

tensions of the building can easily be added. As requested by the customer, the building shines brightly in the company colours of red and yellow.

Builder	Novator - Russia
Building Usage	Agriculture
Surface	1,200 m <sup>2</sup>
Span	31 m
Frame Type	AZM1
Wall System	Horizontal
Roof System	LMR600
