

Bulk Warehouse

With great space and flexibility

The Astron bulk warehouse is located in the picturesque harbour Castellon in Spain. The impressive steel hall is used to store and distribute the clay with which the client, Bulk Cargo, trades. Clay is one of the main ingredients for manufacturing ceramics, for which this region in Spain is very famous.

A logistics hall for bulk cargo requires maximum width space so that loading trucks can manoeuvre flexibly. For this reason, the building has mostly been designed without rooms and troublesome walls. The bulk warehouse has a width of 90 metres and a length of 112 metres. After the erection was completed, an extension with further 90 metres width was added. As required by the local regulations, the bulk warehouse has a height of 17.2 metres.

Builder	Rubrica Navas Metalicas - Spain
Building Usage	Storage & Logistics
Span	90 m
Frame Type	AZM1
Wall System	LPA900
Roof System	Individual
