

With guaranteed cold chain

The cold storage warehouse near Warsaw was erected within a period of seven months for the Polish company JAGO, market leader in the field of frozen produce and ice cream. The warehouse is one of the biggest and most modern examples of cold storage in Poland. Astron delivered the steel frame and the building was erected by our Polish Partner Skalski Budownictwo.

The individual cold storage warehouse was constructed on a building ground surface of 13,200 m². It consists of a steel building divided into four separate zones with different temperatures of up to -25°C. The loading system enables the refrigerated trucks to dock onto the steel hall so the cold chain is guaranteed. The additional office space for the employees is also made of steel.

The client JAGO was very satisfied with the functionality and appearance of the cold storage. The Astron jury were of the same opinion and selected the cold storage as Building of the Month.
