

Freight Warehouse

Prefabricated steel halls made for successful customer

The success story of our customer for the freight warehouse is amazing. Franz Rüdinger invested in his first truck in 1930 and from that day on, he never looked back. Today, the shipping giant from Baden-Württemberg, in its third generation, employs 230 employees and operates 140 trucks.

Together with its long-term Building Partners, Astron has constructed 12 buildings on two sites with a total area of 15,000 m² for this shipping company. Most of the building was realized using prefabricated Astron systems. The site, Boxberg, comprises a freight dispatch hall of 2,000 m². Here goods for forwarding can be stored and then loaded onto the trucks directly. LPA900-panels were used for the wall panelling, which has the colour of sandstone. However,

the end is not yet in sight: Further freight warehouses are planned on the site. Of course, with Astron as Building Partner.

Builder	Linke Industriebau - Germany
Building Usage	Warehouse
Surface	2,000 m ²
Span	20 m
Frame Type	AZM1
Wall System	LPA900
Roof System	LPR1000
