

Fulfillment Center

Optimized for customer requirements

The fulfillment center in Fürstenwalde South was designed and built for the well-known tyre manufacturer Goodyear. With the help of Builder Partner Mattig & Lindner GmbH, the logistics hall was successfully built within a very short period of time and to the full satisfaction of the customer.

The fulfillment center has an area of 3,400 m². The interior of the building was constructed with no disturbing intermediate columns, thus offering sufficient space for the short-term storage of goods. Windows are integrated into the side walls of the hall which ensure that there is a pleasant atmosphere in the interior and that there is a sufficient supply of natural light. On the long side of the hall there are facilities to dock trucks so that rapid loading and unloading of goods

can be guaranteed. The fulfillment center was designed in an unostentatious, respectable gray colour.
