

Incorporating the client's own products

For the blinds manufacturer Žaluzie Neva, a new large storage building was constructed in the Czech Republic in just 10 months. The steel hall was built in an industrial area and serves as the company's brand-new headquarters, including offices, production as well as storage facilities. The customer's wish was for a functional, practical storage building with optimal use of space. The cooperation with our Builder Partner E.Proxima and the excellent quality of the Astron steel structure satisfied the customer.

The whole building complex has an area of 4,200 m². The exterior facades of the large storage building are in a modest silver gray. The arrangement of the panels provides elegant design and a stylish finish. Of course, the experts

of shade technology also took the opportunity to use the most advanced and best quality blinds for the new company headquarters.

Several years after finishing the hall, the customer asked us to extend his current storage building. The extension should maintain the design and color segmentation of the previous stage. This was no challenge for Astron. Together with our local Builder E.Proxima, we managed to fulfill all of the customers needs and supported him with this new project.
