

## Steel Warehouse Building

### Order picking with efficient use of space

This 5,500 m<sup>2</sup> order-picking warehouse was built for Völker GmbH, a company located near Stuttgart. The customer specialises in the import and export of food products, and the company looks back on a long track record of success. For Astron and Builder Partner Mörk it was a very challenging project, but already the third hall of its kind to be constructed for the customer. The steel warehouse building was completed in less than six months.

Logistically, the steel hall is perfectly designed with state-of-the-art facilities for all incoming and outgoing goods. In addition to the warehouse which is equipped with a high-rack system that provides optimal use of space, the steel warehouse building also has offices. The outer panels have a respectable

gray, while 200 transparent panels are incorporated into the roof. They ensure that there is natural light in the hall, thus saving energy. In order to avoid too much heat in the summer months, the panels are slightly tinted.

Builder	Moerk Bau GmbH & Co. KG - Germany
Building Usage	Storage & Logistics
Surface	4,100 m <sup>2</sup>
Span	79 m
Frame Type	AZM3
Wall System	LPA900
Roof System	Polar roof
