

Production, storage and administration

The hall for the automotive supplier in Poland was built in cooperation with our long-term authorised Partner WPIP. The client, KNOTT, is an international company that produces and supplies components for trailers and braking systems for commercial vehicles.

The new branch of the supplier was to be large enough to accommodate the necessary equipment for producing brake systems, axles and trailers. The site has an area of 3,200 m² and, apart from the production steel hall, there is a high rack store with 1,200 m², which was designed by Astron. Next to this, there is a covered storage area, and a multi-storey office building constructed of steel and concrete.

Builder	WPIP - Poland
Building Usage	Automotive Industry
Surface	3,200 m ²
Span	26 m
Frame Type	AZM1
Wall System	LPA900
Roof System	Individual
