

Steel Structure Buildings

Production hall is showing the way forward

This is really a showpiece project: The distribution centre for Lindab in Switzerland. The 5,000 m² building complex in Zurich includes production, warehouse and offices in one central location. The aim was to build a representative hall using the highest technical standards thus ensuring more efficient workflows.

The project was implemented by our Builder Partner HAFAG.CH in only three months. Not only have all expectations in terms of functionality been fulfilled, also the design lives up to the highest requirements: environmentally friendly building solutions with a pleasant indoor climate, perfectly thought out to the last detail. In this project, Astron demonstrates what is possible with steel structure buildings. Let us inspire you!

Builder	HAFAG.CH - Switzerland
Building Usage	Industry
Surface	5,000 m ²
Frame Type	AZM1
Wall System	LPA900
Roof System	Individual
