

Integrated Office Building

Aesthetic and functional

The integrated office building was completed in West Pomerania, Goleniów. In this particular case, our Builder Partner of many years, Multi Projekt, was both contracting entity and construction company. The aim of the building project „Agatrans“ was to design a head office for them.

The building complex has a length of 64 metres and includes not only the production hall with 2,000 m², and the warehouse with a size of 10,500 m², but also the integrated office building, which extends over three floors. In a total area of 1,500 m², Multi Projekt employees can work both enjoyably and efficiently. Integrated into the warehouse, the office building has an insulation of 100 mm, and the roof system even includes an insulation of 200 mm. The aesthetically

pleasing and functional building has a stylish facade in a respectable gray and a traditional brick red. Glass inserts give the office building a modern and stylish appearance.
