

## Customised for VW dealership - fulfilling individual wishes

This tailor-made multi-storey car park in Luxembourg was built by Astron Builder Partner MBS S.A., based in Alzlingen. The parking garage was commissioned by a VW-car dealership that was increasing sales activities and required more exhibition space for new cars.

The client had specific demands for the new multi-storey car park: a particularly attractive architecture, low costs and a short construction period, as well as low future energy costs. Astron was able to fulfill all these individual requirements together with the Luxembourg Builder Partner.

Gray panels give the multi-storey car park a very professional and modern appearance. The time schedule and adherence to budget were exactly as requested by the customer and future

energy costs will be very low thanks to natural lighting and ventilation. The client was more than satisfied with the collaboration and the result - a perfectly customised multi-storey car park.
