

Wholesale Hall

With an exciting look

The wholesale hall was built in Poland in just four months. The customer is a wholesale florist. Thanks to steady growth and business collaborations, this was already the second hall built for the investor.

A particularly striking feature of the hall is the unusual and exciting mix between a modern steel hall and a brick building. The whole construction was designed with ultra-lightweight steel. The total area covers 4,500 m², this includes the multi-storey office building measuring 649 m². The wholesale warehouse area is equipped with a LPR1000 roof.

Builder	TMT Wadi-wuce SP. J. S. Kwasny, M. Jasinski, J. Stacko - Poland
