

Riding Centre

Horse stable

This riding centre is in the Norwegian town Hammerfest, which is the most northern town in the world. Astron and Partner Naeringsbygg AS successfully mastered the challenges posed for a building by such an arctic climate. The customer, Hammerfest Staller AS, was supported in financing the building by Turi Josefsen, a business woman who was born in Hammerfest.

The requirements by the customer and the climatic conditions of the area were optimally taken into account in the construction of the building. The stables can accommodate about 30 horses. Adjoining the stables there is a riding hall, a tribune for visitors, a café and other rooms for social activities relevant for the riding centre. The wooden wall panelling creates a cosy, atmosphere

inside the riding centre. The insulation and the configuration of the building were chosen so that horses and riders could be offered a safe place during the hard arctic winter.

Builder	Hammerfest - Norway
Building Usage	Leisure / Riding Hall
Surface	2,304 m²
Span	31 m
