

Technical innovation as Datacube

Without a doubt, this data centre is one of the most extraordinary projects that Astron has implemented in its history so far. The owner of the data centre is Quickline Business AG, one of the leading ISP companies in Switzerland. With the new Datacube, currently the most modern data centre in Switzerland, the company can perfectly fulfill its customers' requirements for top telecommunication solutions.

Great importance was placed on the safety, sustainability and low energy consumption of the steel-concrete construction. Besides physical safety, the building is equipped with ultra-modern security technology for monitoring. The data centre has a 55 metre high water tank and a private fibre-optic network. Even from the outside, the Datacube is

ultra modern. Silver outer panels give the compact architecture a convincing final finish.

Builder	Direct sales - Suisse
Building Usage	Datacenter
Surface	5,500 m²
Span	30 m
Frame Type	Individual
Wall System	Individual
Roof System	Individual
